

Project Number:	706
Category:	Design/Construction of Fixed Bottom Turbines
Date:	December 2013
Subject:	<i>Checklist of Items for the Design Basis Document for Offshore Wind Turbines</i>
Performing Activity:	ABS Consulting
Principal Investigator:	John Stiff
Contracting Agency:	Bureau of Safety and Environmental Enforcement
Summary:	<p>The researchers developed a checklist to identify the specific topics to address in the design basis of offshore wind turbines, identify which standards are applicable to each topic, and then make a determination on whether each standard is sufficient for this purpose.</p> <p>A draft version of the checklist has been submitted to BOEM. It is an interactive MS Excel spreadsheet with a series of questions requiring yes/no or short answers to the various stages of design. Separate sheets are provided for each phase. Instructions for use are provided.</p>
Key Findings:	N/A
Recommendations:	N/A
Subsequent Studies/Activities:	<ul style="list-style-type: none"> • Developers may use the checklist in their design process to make sure all regulatory items are addressed.
